Avoid an excessive DOM size — 1,194 elements

A large DOM will increase memory usage, cause longer style calculations, and produce costly layout reflows. Learn how to avoid an excessive DOM size. TBT

Consider using a "windowing" library like `react-window` to minimize the number of DOM nodes created if you are rendering many repeated elements on the page. Learn more. Also, minimize unnecessary re-renders using `shouldComponentUpdate`, `PureComponent`, or `React.memo` and skip effects only until certain dependencies have changed if you are using the `Effect` hook to improve runtime performance.

When definition lists are not properly marked up, screen readers may produce confusing or

○   Definition list items are wrapped in `<dl>` elements   ⌄

Definition list items (`<dt>` and `<dd>`) must be wrapped in a parent `<dl>` element to ensure that
screen readers can properly announce them. Learn how to structure definition lists correctly.

○   ARIA IDs are unique   ⌄

The value of an ARIA ID must be unique to prevent other instances from being overlooked by
assistive technologies. Learn how to fix duplicate ARIA IDs.

○   No form fields have multiple labels   ⌄

Form fields with multiple labels can be confusingly announced by assistive technologies like screen
readers which use either the first, the last, or all of the labels. Learn how to use form labels.

○   `<frame>` or `<iframe>` elements have a title   ⌄

Screen reader users rely on frame titles to describe the contents of frames. Learn more about frame

If the webpage does not specify a consistent language, then the screen reader might not announce
the page's text correctly. Learn more about the `lang` attribute.

Users do not expect a page to refresh automatically, and doing so will move focus back to the top of the page. This may create a frustrating or confusing experience. Learn more about the refresh meta tag.

○ `<object>` elements have alternate text ⌄

Screen readers cannot translate non-text content. Adding alternate text to `<object>` elements helps screen readers convey meaning to users. Learn more about alt text for `object` elements.

The summary attribute should describe the table structure, while `<caption>` should have the onscreen title. Accurate table mark-up helps users of screen readers. Learn more about summary and caption.

○ Cells in a `<table>` element that use the `[headers]` attribute refer to table cells within the same table. ⌄

Screen readers have features to make navigating tables easier. Ensuring `<td>` cells using the `[headers]` attribute only refer to other cells in the same table may improve the experience for screen reader users. Learn more about the `headers` attribute.

TRUST AND SAFETY

○ Ensure CSP is effective against XSS attacks ⌄

Description	Directive	Severity
Host allowlists can frequently be bypassed. Consider using CSP nonces or hashes instead, along with `‛strict-dynamic‛` if necessary.	script-src	High
`‛unsafe-inline‛` allows the execution of unsafe in-page scripts and event handlers. Consider using CSP nonces or hashes to allow scripts individually.	script-src	High
